Experience

Cedar Austin, TX

Senior Software Engineer Nov 2021 — Present

- Architected and optimized Stripe payment processing infrastructure, eliminating redundant API calls and reducing payment processing costs by over $100K annually.
- Designed and delivered end-to-end integration with HealthEquity, Cedar's largest health benefit accounts partner, enabling a new payment channel that drives millions of dollars in annual collections.
- Owned the pre-visit patient experience platform, introducing ML-driven OCR for insurance card capture that accelerated eligibility verification and reduced manual intake overhead across health system clients.
- Expanded Cedar's payment ecosystem by integrating PayPal as an additional payment method, increasing patient payment coverage and conversion for high-balance accounts.
- Re-architected patient communications infrastructure, improving delivery reliability and enabling dynamic, rules-based messaging strategies across Cedar's client portfolio.
- Built an ML-powered payer fax automation pipeline (OCR + Naive Bayes) for prior authorization processing, reducing agent case time by up to 70%.
- Decomposed a monolithic client-server architecture into event-driven microservices, improving throughput and enabling independent scaling of payment-critical workloads.

Actium Health (SymphonyRM) Austin, TX

Software Engineer Jul 2019 — Nov 2021

- Designed a high-throughput patient outreach platform on Twilio that powered SMS campaigns across 14M patient lives, contributing to 1,395 early breast cancer diagnoses — recognized as a measurable clinical impact milestone.
- Built ETL pipelines in Apache Airflow processing sensitive healthcare data from client SFTPs; normalized and loaded records into production databases under HIPAA constraints.
- Architected a standardized provider data export service powering external physician directories for multiple health system clients.
- Led a distributed offshore engineering team and served as an Engineering manager, consistently delivering cross-functional projects on schedule.

Accenture Bengaluru, India

Software Engineer Oct 2015 — Jul 2017

- Built financial web applications in ReactJS and AngularJS for enterprise clients; owned features end-to-end from design through production deployment.

Education

University of the Cumberlands
Ph.D., Information Technology
2022 — Present

Texas State University
M.S., Computer Science
San Marcos, TX • 2017 — 2019

JSS Science and Technology University
Masters In Computer Applications
Nov 2012- June 2015

Skills

Languages
Python, JavaScript, TypeScript, C++

Frameworks
React, Flask, Django, Node.js, gRPC, Serverless

Payments & Integrations
Stripe, PayPal, Twilio, TokenEx, Trustcommerce

Databases
PostgreSQL, MySQL, DynamoDB

Cloud & Infrastructure
AWS, Docker, Airflow, Harness, Datadog, Sentry

ML & Data
Anomaly Detection, OCR, Naive Bayes, ETL, Looker, Datadog
